Version 1.1 (23 June 2016)

Digital Printing and Imaging (DPI) Ordering Guide

Information Technology Commodity Council

1. ## *DPI Goal*

   The goal of the overall IT Commodity Council is to support missions that require computing, printing, and cellular capabilities by offering products through enterprise buying programs to deliver the right device at an affordable cost ensuring success across the spectrum of operations, whether in peace or at war. DPI supports the lifecycle of printing products with the goal of delivering a range of printing capabilities, which include plug-n-play network connections, pre-set security configurations, and devices sized for the mission need. DPI is an enabler to meet Air Force mission needs allowing product cycle updates to increase capabilities at competitive pricing and offering products ranging from basic office printers and scanners to high-end performance printers supporting CONUS and OCONUS operations.

2. ## *DPI Scope*

   The DPI blanket purchase agreements (BPAs) will provide a range of printer products covering the full spectrum of office-centric operations and missions, including single-function devices (SFD), scanners and multi-function devices (MFD) commonly available. The DPI BPAs will provide print/scan devices to support Air Force users, authorized AF contractors, and the Office of Secretary of Defense (OSD).

Mandatory Use

In accordance with AFMAN 33-153, paragraph 2.2, "Procure IT hardware (including PWCS) using applicable enterprise buying programs (e.g. AFWay, NETCENTS) mandated by joint SAF/AQ and SAF/CIO A6 memorandums, acquisition policies, and/or IT governance policies published under AFPD 33-4, *Information Technology Governance*, to implement OMB Circular A-130, *Management of Federal Information Resources*, (T-1).

Integrated Life cycle Management guidance including IT requirements are provided in AFI 63-101/20-101.

Waiver authority for this enterprise buy mandatory use requirement is SAF/CIO A6, if not otherwise provided by the program.

3. DPI Ordering Guidance

The DPI program currently provides two distinctively different printer sets. The first includes a range of SFDs, which are competed and selected based on best value to meet the Air Force requirements including monthly page counts, security parameters, and capability. These devices posted on AFWay are available for purchase with no further competitive action required. The included memorandum (Appendix A) addresses the information needed for contract files. The second set of printer products are the MFDs. The ITCC validates the proposed MFDs against the technical parameters to ensure they meet or exceed all of the mandatory requirements. It is important to note that all purchasers of any DPI MFD must complete their own cost comparison amongst the products offered and justify the selection in accordance with normal acquisition and contracting requirements. Contracting officers and Government Purchase Card (GPC) holders should ensure due diligence was completed prior to issuing an order for DPI MFD products. Products identified in the scanner categories were also validated against the technical parameters to ensure they meet or exceed all of the mandatory requirements. It is also important to note that all purchasers of any DPI scanner must complete their own cost comparison amongst the products offered and justify the selection in accordance with normal acquisition and contracting requirements. Contracting officers and Government Purchase Card (GPC) holders should ensure due diligence was completed prior to issuing an order for scanner products.

Total Cost of Ownership: The best way to compare print devices is using total cost of ownership (TCO) calculations. One of the most costly aspects of printing is the use of consumables, toner/ink and maintenance items such as photoconductors, fusers, etc. Costs of consumables can exceed the price of the device in many instances. Comparison of TCO values can be accomplished at the total value over a period of time and print volume or as a per page cost.

Warranty Information: Appendix B provides links to the warranty information applicable to the DPI products offered under each Product Selection Cycle (PSC).

Blanket Purchase Agreements: Appendix C provides links to the BPAs for the six DPI vendors. In addition, there is a link to the DD Form 2579, Small Business Coordination Record.

4. DPI Product Catalog

The DPI product catalog provides specific information regarding the devices offered under the current PSC – PSC2016. These products will be available until the next PSC is completed and products posted to AFWay. The ITCC conducts selection cycles annually.

PSC 2016 products include the following (click to jump to the specific product table):
